MESSAGE

The Internet phenomenon has had a transformational affect on the society. It has opened a new medium of communication especially for governments to interact with citizens. The National e-Governance Plan (NeGP) is not just about mere use of Information Communication Technology (ICTS) including internet to improve Government processes; rather it is about application of ICTs to transform processes. NeGP is not limited to the simple on-line integration and presentation of information pertaining to public services; it rather represents a deep recasting of the procedures and structure of the administration resulting in complex yet collaborative workflows among the participating departments. This requires e-Government solutions to be intra-operable, distributed, and open in nature.

In order o ensure the above, it is important that all stakeholder meet from time to time and discuss the various challenges and explore the potential offered by upcoming technologies. By including m-Governance and Cloud Computing as topics for deliberations, I believe ELITEX 2011 will be beneficial to all and throw up concrete recommendations for implementing e-Governance activities in an accelerated and meaningful manner.

I wish the event all success.

(R. Chandrashekhar)
